SMART ID SOLUTIONS

Asset Management Solutions for Incident Response

EasyLogic has developed an RFID based Asset Management Solution for Incident Response (Fire Departments). RFID tags are attached to the equipment that is required on an Incident Response Vehicle.

An Asset Management system records what equipment goes onto what truck, when it was purchased, when it needs to be maintained. Uniforms and protective suits are also tracked, as are cleaning schedules.

- Asset Management of tools, equipment, hoses, extinguishers, breathing apparatus, rescue tools
- Preventive and Corrective Maintenance
- Track and Trace location and usage of equipment
- Collect and record test and inspection certificates

Benefits

- Quickly create an inventory of items on a vehicle
- Verify if all equipment has returned from the field
- Locate missing equipment using handheld terminal
- Keep track of equipment and optimise maintenance
- Prevent teams responding with missing equipment
- Save time in making a fire truck ready for new responses
